BioAcoustics Session

When you arrive for your appointment, you will fill out a comprehensive medical and personal questionnaire. This questionnaire will provide invaluable information for your practitioner during the next phase of your appointment… The Voice Spectral Analysis.

THE VOICE SPECTRAL ANALYSIS

For your VSA, you will speak into a microphone connected to a computer. The recording is your Voice Print. Your personal voice print reveals the specific energies that are high or low in your voice. This set of frequencies is unique to you and to the issues you would like to help your body resolve. It is the aural mirror of the energy frequencies of every aspect of your body, including vitamins, minerals, hormones, toxins, pathogens, muscles, nerves, etc. This unique voice print enables us to determine how these aspects of your body can be helped to balance themselves, thereby promoting the health of your body in general.

The potential sounds are then tested at length, using both objective and subjective measurements, and the final sounds are selected.

Finally, a specially designed tone box is programmed with the appropriate sound formula for your use. The initial tone trials may last between two and three hours. A follow-up visit, and often a reassessment of the voice, is essential within a week or two.

FOR BIOACOUSTICS IN CHICO

Call
Your practitioner
Judy Chambers, BARA
BioAcoustic Research Associate
Judy Chambers is a licensed audiologist and speech pathologist. After spending 15 years in private practice, she became fascinated by BioAcoustics, and began studying with Sharry Edwards in 1995.

The field of BioAcoustics is unrelated to either speech or audiology. It is a quite separate discipline and technology.

Judy Chambers, MA, BARA

Come and experience the BioAcoustics of Sharry Edwards, M.Ed

WHAT IS BIOACOUSTICS?

BioAcoustics is a form of sound therapy that stimulates the self-healing responses of the body. Your voice is analyzed to determine the frequencies that your body needs. The body responds quickly when it receives the needed frequencies. We have found that, given proper energetic support, your body can achieve a balanced state of health. This is not new: music and movement have long been used to influence the body, albeit in indirect ways. And, as we now know, your body is composed of energy—energy is frequency. Every frequency in your body is expressed in your voice.
For further information, including a free, informational DVD, call Judy Chambers, BARA. Also, you may visit www.SoundHealthOptions.com.

WHAT CAN IT DO?

BioAcoustics has been useful in cases of:

- Multiple Sclerosis
- Chronic Fatigue
- Parkinson’s
- Tinnitus
- Macular Degeneration
- Autism
- Emphysema
- Arthritis
- Brain Injury
- Stroke
- Bipolar Disorder……and more…….

CASE STUDIES:

In 1997, Dr. Debra F., a chiropractor, came to Judy Chambers with a painful knee. The doctors had told her she would never walk normally again. Eight months later, she had regenerated the cartilage in her knee. In 2007, she returned to work on the other knee!

In 2004, John U. brought his mother in for help with her very painful rotator cuff injury. She did not want surgery. By the end of the first session, she was able to raise her arm straight up! In fact, she went home, and did the backstroke for a half hour, forgetting that she needed time to heal. It took a few more weeks.

In 2008, Brendan C.’s mother brought him in to see Judy because he had been diagnosed with ADD, and was having difficulty in school. His voice print indicated that the problem was the peanut butter he was eating every day. His voice had shown the architecture for mycotoxins. He stopped the peanut butter, and his schoolwork improved!

In 1993, Florida Marine Law Lawyer Bob Bethel was thrown from his motorcycle in an automobile accident so devastating that his lower right leg was almost torn off.

Months of reconstructive surgery—grafting muscles from his back and other parts of his body—ensured that Bob would not lose his leg. But he was unable to continue his law practice and, even worse, to play tennis, his greatest passion. He moved to his parents’ home in Ohio to recuperate. One morning, browsing in a local store, Bob heard that a nearby research center, Sound Health Alternatives, was testing the revolutionary theory that sound waves can regrow muscle tissue.

Reluctantly, but because he had nothing to lose, Bob sought out Sharry Edwards, founder/chief researcher at the sound research institute then located in Athens, Ohio, and now in nearby Albany.

Today, 16 years later, Bob’s lower right leg—which surgeons did not amputate only because he begged them not to—is virtually whole again. Even one year after his sound health treatments began, he could play tennis. He became so excited by Sharry Edwards’s sound health therapy and all it involved that he spent seven years working as the business manager of Sound Health Alternatives (the technique itself is
